CAREER OBJECTIVE

Results-driven Computer Science Engineering student with a 9.07 CGPA and hands-on expertise across full-stack development, AI-powered applications, and UI/UX design. Proficient in Python, JavaScript, the MERN stack, and Figma, with a track record of building secure, user-centric systems — from a fraud-detection FinTech platform to a role-based EdTech dashboard. Smart India Hackathon 2024 Finalist and multi-hackathon contributor seeking to apply strong problem-solving skills and a fast-learning mindset to a challenging software engineering role.

EDUCATIONAL QUALIFICATION

B.Tech – Computer Science Engineering, MVGR College of Engineering, Vizianagram

CGPA: 9.07

Diploma – CSE, Government Polytechnic for Women, Bheemunipatnam

CGPA: 9.10

SKILLS

- **Languages:** Python, C, C++, Java
- **Design:** Figma, Canva, UI/UX Design
- **Web Development:** HTML, CSS, JavaScript, React.js, Node.js, Express.js, **MongoDB**
- **Tools:** Git, GitHub, MATLAB, Adobe Creative Cloud
- **Concepts:** OOP, REST APIs, Authentication (JWT), MERN Stack, Problem Solving

INTERNSHIPS

Google Android Developer — AICTE EduSkills (Google for Developers) 01/2026 – 03/2026

Cohort 15 · Completed

- Completed training focused on Android application development fundamentals.
- Learned activity lifecycle management, layouts, and UI design principles.
- Built foundational understanding of mobile application architecture.

MERN Full Stack Development + Project — AICTE EduSkills 04/2026 – 06/2026

Cohort 16 · Completed

- Built full-stack web applications using MongoDB, Express.js, React.js, and Node.js.
- Developed REST APIs, authentication systems, and database integrations.
- Applied Git workflows and deployment practices through hands-on projects.

Mobile App Development with React Native — AICTE EduSkills 06/2026 – 08/2026

Cohort 17 · Completed

- Completed an industry-aligned internship building cross-platform mobile applications with React Native.
- Developed reusable UI components and implemented navigation across multiple app screens.
- Applied JavaScript and React fundamentals to build and test functional mobile app modules.

PROJECTS

CascadeGuard AI — Intelligent Payment Gateway & Risk Evaluation System

Tools Used: Python, Streamlit, Razorpay API, REST APIs, Data Analytics

A secure FinTech application integrating Razorpay checkout flows with real-time risk screening, automated fraud detection heuristics, and interactive merchant analytics.

- Engineered a FinTech risk assessment prototype deploying Razorpay API test flows and cryptographic HMAC signature validation for secure transaction handling.
- Developed rule-based screening algorithms to classify transaction anomalies, display risk scoring tiers, and minimize potential merchant exposure.
- Built and deployed an interactive Streamlit monitoring dashboard offering real-time transaction inspection and merchant metric visualization.

LearnMate — Scalable Education & Batch Management Platform

Tools Used: React, Node.js, Express.js, MongoDB, Tailwind CSS (prototyped in Figma)

A role-based EdTech platform designed to streamline administrative workflows, student attendance tracking, fee invoicing, and class scheduling.

- Architected a full-stack education management system using the MERN stack to digitize attendance workflows, fee tracking, and multi-cohort class scheduling.
- Created RESTful backend services with Express and MongoDB, enforcing structured data modeling and JWT-based authentication for administrative controls.
- Designed an accessible, user-centric dashboard UI with React and Tailwind CSS, reducing administrative navigation overhead.

Real-Time Location Tracking for NSG

Tools Used: Blender, Python, Matplotlib

- Developed a live tracking system for NSG (National Security Guard) teams operating in complex urban environments such as hotels and metro stations.
- Focused on enhancing tracking accuracy by addressing challenges with traditional GPS/GSM in multi-floor and basement environments.
- Integrated real-time location data with 3D building models for tactical visualization, aiding in better decision-making during critical operations.
- Proposed a solution that eliminates the need for UWB hardware, ensuring cost-effectiveness while maintaining operational reliability.

Hotstar Prototype using Figma

- Independently designed a UI/UX prototype of Hotstar, focusing on seamless navigation and user experience.
- Conducted self-testing and iterated on the design based on feedback to improve usability and aesthetics.

AI Voice Assistant using Python

- Developed a Python-based voice assistant capable of performing tasks such as opening applications, searching the web, fetching news/weather updates, and responding to voice commands.
- Implemented speech recognition, text-to-speech, and NLP libraries to enable real-time interaction.
- Integrated APIs to extend functionality for tasks like music playback, Wikipedia search, and system automation.

AI-Powered Requirement Gathering System

- Developed a multi-agent AI platform for automated SRS and BRD generation.
- Implemented multilingual voice support and ambiguity detection.

RAG-Based Knowledge Retrieval System

- Built a Retrieval-Augmented Generation pipeline using LLMs.
- Applied chunking, reranking, and prompt engineering.

CERTIFICATIONS

- UI/UX Design by Tech Mahindra
- AICTE SIH Participation
- Certificate of Participation in NYD Hackathon 2025
- Python Essentials 1 – Cisco Networking Academy
- Quantum Fundamentals by Wiser

ACTIVITIES

- Finalist at Smart India Hackathon 2024
- Participant of National Youth Day Hackathon 2025
- Volunteered for Swecha AP Freedom Fest 2025
- Active volunteer at From the Youth For the People and MVGR GLUG
- Selected Team – Sankalp 2025 Intra-College Hackathon
- Coordinator – Aadhritha Hack24 National Hackathon
- Selected Team-TechSprint 2026 Google for Developers
